SUMMARY

B.Tech 2nd-year student with expertise in Python, Java (OOP), and Operating Systems. Passionate about blockchain, currently developing Vartul, a PoS-based social media platform. Experienced in UNIX/Linux programming, shell scripting, and system calls. Active in hackathons and a core member of my college's Operations Team, excelling in team coordination and problem-solving.

SKILLS

C , C++	HTML	Blockchain & DLT
JAVA	CSS	SQL
PYTHON	JavaScript	

PROJECTS

NOVA – Next-gen Optimized Virtual Assistant

- NOVA is a futuristic, intelligent, and highly optimized virtual assistant designed to streamline digital interactions and enhance productivity. Built with modularity and scalability in mind, NOVA combines cutting-edge technologies to deliver a responsive, contextual, and personalized assistant experience.

MUJ-Marketplace – Buy & Sell Campus Essentials

- MUJ-Marketplace is an online platform where college students can buy and sell products and actively engage with college activities. It provides a convenient space for students to connect, trade items, and stay involved in campus events.

Spiko – Real-Time Audio Translation Extension for Online Learning

- Spiko is a real-time video-audio translation extension that translates audio into the user's preferred language, offering live subtitles and voice translation, making online education more accessible and inclusive.

Vartul – A blockchain-based social media app (currently working)

- A social media app where users can interact with influencers, and both parties can earn tokens that can later be converted into money.
